

IMPORTANT:

Waterproof Seal

1. Make sure the silicone seal is properly in position
2. Tighten ALL screws fully. Then GO BACK and double check EACH screw is fully tighten.

NOTE: when the screws are fully tightened the silicone pad will be squeezed and protruding outward on all sides.

Not fully tightening a screw may result in a small air gap where air will come inside and condense into water.

To ensure the light is waterproof you must make sure it is fully Air-Proof
